In-Class Test (ICT)
ISA104 AI Application Design

Assignment

You will take part in an individual exam-style assessment divided into two parts.

Part 1. Answer 20 multiple choice questions (MCQs) based on the lecture content.

Part 2. Write a reflective essay on one of the practical tasks accomplished in the module

Time: Semester 1, Week 10 - during your regular scheduled lecture time.
Venue: The ICT venue will be announced one week before the exam.

Assessment Details
Assessment Type: MCQ quiz and reflective writing
Submission method: in-class, on exam paper
Percentage of module mark: 35%
Learning Outcomes assessed: A, B, D, E
Duration: 90 minutes

Assessment Task

Part 1: Answer MCQ (20% of the total module mark)
In this assessment task, you will answer 20 multiple-choice questions (MCQs). Each question has one correct answer. The questions will be based on the lecture content covered from week 1 to week 9.

Part 2: Reflective writing (15% of the total module mark)
For part 2 of this assessment task, you will be given a specific question that invites you to reflect on a practical component of your AI app design project. The goal is to critically evaluate your personal development throughout the project, including your technical and professional learning, your role in the project, and how you intend to apply this experience in future engineering or design contexts. This task is not just about describing what happened, but about demonstrating your ability to think critically about your experiences and connect them to the broader themes and concepts covered in the module.

Requirements
Your reflection must be structured into three key sections:

- What? – Describe the specific practical component you are reflecting on. What did you do? What was your role in the project? What challenges did you face?
- So What? – Analyse and reflect on the significance of your experience. What did you learn? How did it relate to the module content? What does it tell you about your skills, knowledge, and professional development?
- Now What? – Consider the future. How will you apply what you have learned in this project to future engineering or design situations? What changes might you make based on this experience?

Assessment Timeline

Semester 1
Week 1: The task sheet will be released on LMO.
Week 7: You will take part in a formative ICT session, and feedback will be given.
Week 10: You will take part in the ICT assessment.

Further details

Advice

- You may use the whole time during the exam as you wish, however you are advised to spend around 30 minutes on the MCQs and 60 minutes on the writing.
- You are expected to write between 400 and 600 words in part 2. There are no direct penalties for being either under or over the word count. However, if your essay is too short you may not be able to accomplish the requirements of the Task section and the examiner may also find it difficult to award higher marks in the other categories. On the other hand, you are unlikely to gain many more marks for writing over 600 words and are advised to focus on the correctness and quality of your language instead.
- Note that a specific structure is required for the writing. Make sure you attend your seminars so that you fully understand what you are required to write. Make sure you participate fully in the formative ICT session held in week 7 so that you can practise this assessment.

Marking

- The MCQ will be marked by computer. Make sure you follow the instructions to make sure your answers are read correctly.
- The reflective essay will be assessed based on the Reflective Writing Marking Descriptors available on page 3 of this document.

Academic Integrity

- Assignments must all be individual pieces of work.
- This assessment will be completed without the assistance of any physical or digital materials or devices.
- Plagiarism (copying directly from sources), collusion (working with others or copying directly from your peer when you are required to work individually) and any other instances of academic dishonesty will be penalized. Penalties range from capped scores to an award of 0 (zero). In the case of plagiarism, penalties depend on how much has been copied. Please refer to the XJTLU Academic Integrity Policy.

Reflective Writing Marking Descriptors

Points	Task (5%)	Coherence and Cohesion (5%)	Grammar and Vocabulary (5%)
5	Comprehensive and insightful reflection clear description, deep analysis, and thoughtful future application. Demonstrates critical thinking and thorough module content awareness.	There is strong cohesion between paragraphs and sections. Uses a variety of cohesive features within and between paragraphs. Any instances of over-, under-, or misuse of cohesive features occur only as slips.	Uses a wide range of complex structures and less common lexis. Grammar and vocabulary are mostly error free, and any errors are minor.
4	Clear reflection with only minor gaps: adequate description, reasonable analysis, and some future thinking. Some knowledge of module content. Uses several specific examples from own experience.	Uses a range of cohesive features. Over-, under-, or misuse is rare and minor. There may be cohesive links between paragraphs.	Lexical and Grammatical range is wide, allowing for frequent reformulation as appropriate. Most sentences are error free.
3	Reflection covers relevant points and demonstrates knowledge of the course, but ideas may not all be fully developed. Uses examples from own experience which may not always be directly relevant.	All paragraphs have clear central topics, and ideas within the paragraphs are coherently arranged. Uses a range of cohesive features but with some over-, under-, or misuse.	There is topic-specific lexis, and the range of lexis and grammar is wide enough to avoid frequent repetition. Errors or awkward wording are frequent but rarely reduce clarity. There are only occasional basic errors.
2	Basic reflection: description present, limited insight or vague next steps. Basic knowledge of module content. Uses at least one specific example from own experience.	Uses a range of cohesive features with some over-, under-, or misuse, but errors do not reduce clarity.	Lexical and grammatical range is wide enough to allow some reformulation as appropriate. Errors with lexis and academic style may be frequent but do not reduce clarity.
1	Minimal or unclear reflection; lacks relevance or depth. One step of the reflection may be missing. No demonstration of module content knowledge.	Some paragraphs do not have clear central topics, and/or not all ideas are coherently arranged. Cohesive feature lack range and are often over-, under-, or misused.	Language is adequate for academic tasks. Error density is high, and/or errors sometimes reduce clarity.
0	Content not relevant to task	Paragraphing may be lacking or illogical. Cohesive features are basic, inaccurate, lacking, and/or repetitive.	Lexical range is minimally adequate for academic tasks, and/or the density of basic errors is high, and/or errors often reduce clarity.
