ISA104 / AI APPLICATION DESIGN

Tutorial 8 | Reflect and Improve Your AI Agent

2–hour group tutorial • Use your existing AI Agent project. Discuss each question and record your ideas.

Group: _____ **Date:** _____

01 Who are your users, and what do they need?

Focus on the real user problem, not just on the AI features you have built.

Complete this sentence for your current Agent:

Our Agent helps [type of user] to [task] because [current difficulty / need].

What would be easier or better for these users if the Agent worked well?

---

02 Does your design work for different users?

People in the same target group may have different abilities, experience, languages or contexts.

Choose two different users from your target group. What might each person need?

User / situation	What works for them?	What might be difficult?
User A		
User B		

What is one change that would make your Agent more inclusive or easier to use?

---

03 Would new AI features genuinely help?

Think about the features from this week's lecture. You can choose "No" for all of them.

Discuss each possibility for your own users and their usual context:

Possible feature	Needed?	Who benefits, and what task becomes easier?
Voice & speech *Speech input or spoken answers; useful for hands-busy or reading needs.*	☐ Yes ☐ No ☐ Not sure	
Multimodal feedback *A useful mix of text, images, sound or other feedback.*	☐ Yes ☐ No ☐ Not sure	

Could any of these features make your Agent harder to use in its real context?

For example: a noisy room, shared space, slow connection, unclear AI answers, or too much information.

YOUR NEXT STEP Choose one decision

You do not have to add new features. A simpler design can be the better choice.

What will your group keep, change, or decide not to add — and why?

Design reminder: Start with user needs. Add AI only when it makes a real task better.
